

CLAIM AMENDMENTS

1. [Previously and currently amended] To aid singing in a shower enclosure having a vertical enclosure surface streaming with water from a downpouring showerhead, a waterproof lyrics display system comprising: at least one waterproof page of song lyrics, said page having a page surface; and support means solely comprising a thin water layer wetting said page surface and readily and moveably attaching and supporting it by water adhesion on said enclosure surface at changeable heights convenient for said lyrics to be easily read by persons of different heights standing up singing.

2. [Original] The display of claim 1 wherein there are multiple pages of song lyrics.

Claims 3-4 [Cancelled]

5. [Previously amended] The display of claim 2 wherein the multiple pages comprise a book with a front and back book cover, and said book has a flexible binding enabling the book cover to flatten closely against the shower enclosure surface, so as to enable support of said display thereon by wetting and water adhesion.

Claims 6-23 [Cancelled]

24. [Previously amended] The display of claim 5 wherein the book has the slim proportions of a magazine or pamphlet, and a cover area sufficiently large in relation to weight and thickness of the book to enable support of the book on a shower enclosure wall by water adhesion sufficient to prevent the book from being displaced by water flooding down the enclosure surface against edges of the book.

25. [Original] The display of claim 24 wherein the proportions fall between those of 8.5" x 11" x 1/4" and 5.5" x 8.5" x 1/16".

Claims 26-28 [Cancelled]

29. [Previously amended] The display of claim 1, wherein the font size of the lyrics is 18 points or greater, and the page size is 8.5" x 5.5" or greater.

Claims 30-34 [Cancelled]

35. [Previously amended] A method of aiding singing in a shower enclosure, comprising:

- (a) providing at least one page of waterproof song lyrics;
- (b) wetting said at least one page; and
- (c) supporting said at least one page along a shower enclosure surface streaming with water from a downpouring showerhead at a vertical location which is substantially at eye level of a person standing in said shower enclosure, said supporting step comprising adhering said at least one page at said enclosure surface solely by means of water adhesion due to formation of a water layer between said at least one page and said enclosure surface when said at least one page is vertically laid along said surface.

Claims 36-43 [Cancelled]

44. [Previously added] The method of claim 35, further including the step of sliding said at least one page along said shower enclosure surface in order to adheringly place said at least one page at different locations therealong.

Claim 45 [Cancelled]

46. To aid singing in a shower enclosure having a shower enclosure surface and a shower head downpouring a flood of water over said surface, a waterproof lyrics display system comprising: at least one paper-thin page having a page surface; and support means consisting solely of a water film wetting said page surface and attaching it by water adhesion directly, without intervening materials, to said shower enclosure surface; and lyrics displayed in a size and style easily read

through downpouring water; said display being sufficiently thin and lightweight, and said page surface being sufficiently large, that said water adhesion support means prevents said flood of water from washing said display system off said enclosure surface, maintaining said display system at a height convenient for a person standing up singing.

47. The display system of claim 46, wherein there are multiple pages of lyrics comprising a book; and said book has a front cover, a back cover, and a binding; and said binding is sufficiently flexible to allow both said covers to fold flat against the shower enclosure surface and adhere to it by water adhesion; and said covers have a sufficiently large area, and said book is sufficiently thin and lightweight that said water adhesion support means can resist the flood of water against the edges of the book and maintain it supported on the shower enclosure surface.

48. The display system of claim 46, wherein the paper-thin page material is selected from the group consisting of waterproof paper, waterproof plastic, and laminated paper, said material being able to sufficiently retain a water film, so as to enable support by water adhesion of said material on said enclosure surface.

49. The display system of claim 47 wherein the thickness of the book is less than 2mm.
